FluidSurveys

An online tool for creating professional and secure surveys

In this day and age, organizations are looking for a simple to use survey tool that can meet all of their needs while being easy to deploy and customizable to their needs.

What is FluidSurveys?

FluidSurveys is enterprise class survey software that can be installed on an organization's internal servers or can be hosted on FluidSurveys' secure servers. The product is used by organizations for market research, public opinion polls, customer/employee polling, and more...

Why use FluidSurveys?

Surveys created using FluidSurveys are CLF2.0 compliant, 508 Compliant and meet W3C Accessibility guidelines while also conforming to all common internet standards. The product is customizable to an organization's needs and can be customized to match the branding of the client. The product in itself includes all common and necessary features that one would expect for survey software to have. Any features that an organization may need that are not included in the base package can be deployed upon request.

We have LOTS of features.

Please note that the list below may not contain all features as we update our software frequently and new options are added very often.
